Introduction: Climate change

CO2 x 2

Atmospheric CO2 concentration

Global average long-term atmospheric concentration of carbon dioxide (CO₂), measured in parts per million (ppm). Long-term trends in CO₂ concentrations can be measured at high-resolution using preserved air samples from ice cores.

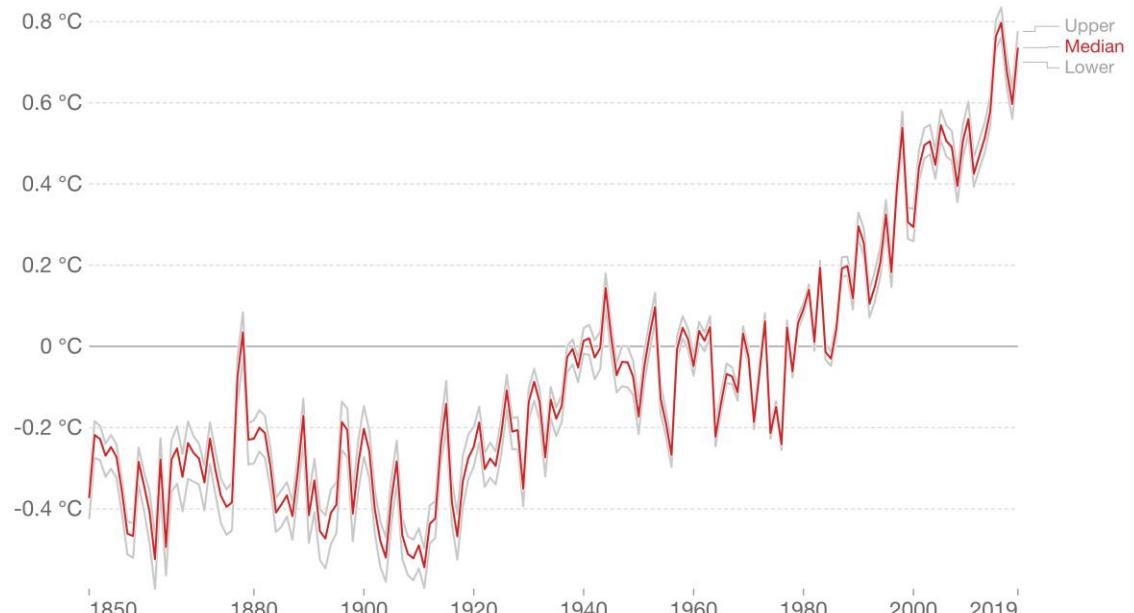

Source: EPICA Dome C CO₂ record (2015) & NOAA (2018)

Introduction: Climate change

+ 4-5 °C in the 21st century

Glaciers-antarctic sea are retreating

Source: climate.nasa.gov

Basics

1 Tonne CO₂e

≈

≈ 5.000 km Auto fahren

≈ 4.000 km Flugzeug economy class

≈ 80.000 km Zug fahren

≈ 80 Jahre Wachstum einer Buche

CO₂e Fußabdruck pro Kopf in D

Basics: CO₂ Fußabdruck des Gesundheitswesens

- Der eCO₂ Fußabdruck des Gesundheitssystems macht 4.4% der globalen Emissionen aus (in Deutschland 6,7%*, Platz 8)
- Wenn das Gesundheitssystem ein Land wäre, dann wäre es der 5 größte Treibhausgasproduzent weltweit
- Die EU ist verantwortlich für 12% des CO₂ des Gesundheitssystems, repräsentiert aber nur 6% der Weltbevölkerung

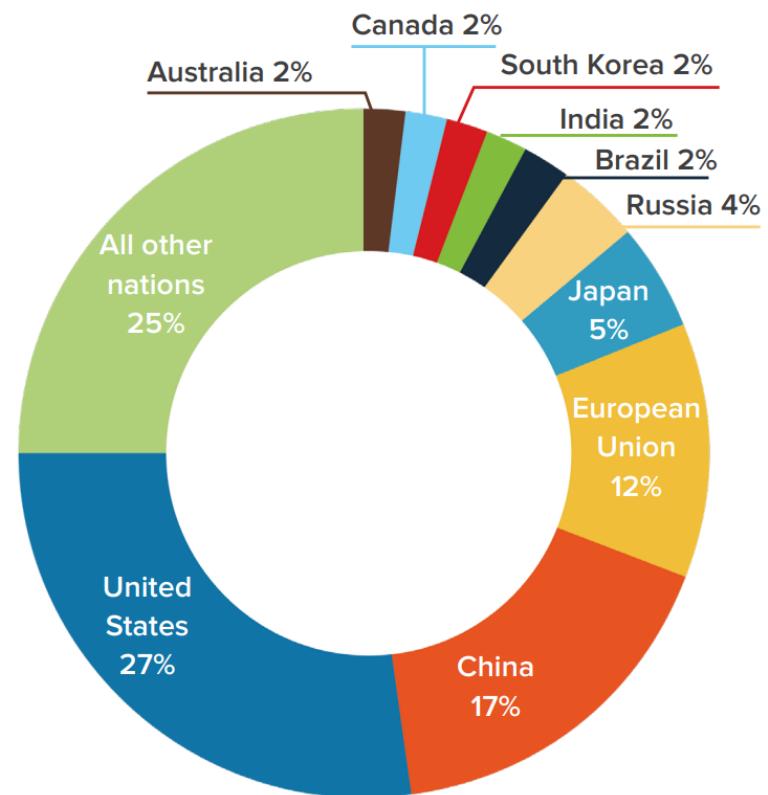

Figure 8: Top ten emitters as percentage of global health care footprint.

*International comparison of health care carbon footprints, Peter-Paul Pichler et al, 2019 Environ. Res. Lett. 14 064004

The environmental impact of GI endoscopy

FACTS

Waste generator

- 2^o-3^o highest waste generator
- ≈ 2 kg per procedure

- Landfill (64%)
- Incinerated (28%)
- Recycled (9%)

CO2 emissions

- ≈ 5 kg CO2 per endoscopic procedure
- 0.28 kg CO2 per biopsy
- 85.768 tonnes of CO2 annually

The path towards sustainable GI endoscopy

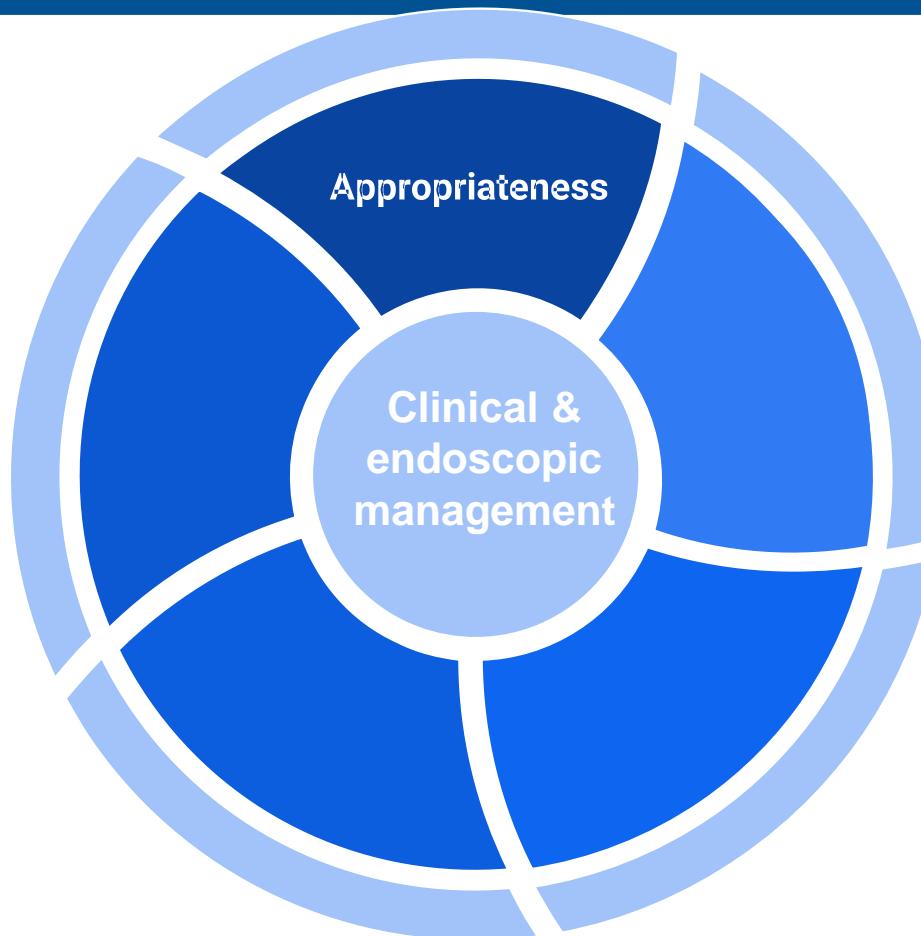

The path towards sustainable GI endoscopy

Clinical & endoscopic management

Adequate GI endoscopy indication

The path towards sustainable GI endoscopy

Rate of inappropriate GI endoscopy: 20% - 30%

- **2 meta-analyses: ≈ 75.000 patients**
- $\uparrow\uparrow$ Yield of GI endoscopy

Meta-Analysis

Diagnostic yield of upper endoscopy according to appropriateness:
A systematic review

Systematic review with meta-analysis: the appropriateness of colonoscopy increases the probability of relevant findings and cancer while reducing unnecessary exams

The carbon cost of inappropriate endoscopy

Hintergrund:

- 45 endoskopische Prozeduren werden pro 1000 Einwohner in Italien pro Jahr durchgeführt¹
 - 54% ÖGD
 - 46% Kolo
- Inadäquate Indikation:
 - 22% aller ÖGD²
 - 29% aller Koloskopien³

¹ Buscarini E et al. White Paper of Italian Gastroenterology: Delivery of services for digestive diseases in Italy: Weaknesses and strengths. *Digestive and Liver Disease* 2014; 46. doi:10.1016/j.dld.2014.02.019

² Zullo A et al. Diagnostic yield of upper endoscopy according to appropriateness: A systematic review. *Digestive and Liver Disease* 2019; 51: 335–339. doi:10.1016/j.dld.2018.11.029

³ Frazzoni L et al. Systematic review with meta-analysis: the appropriateness of colonoscopy increases the probability of relevant findings and cancer while reducing unnecessary exams. *Aliment Pharmacol Ther* 2021; 53: 22–32. doi:10.1111/APT.16144

The carbon cost of inappropriate endoscopy

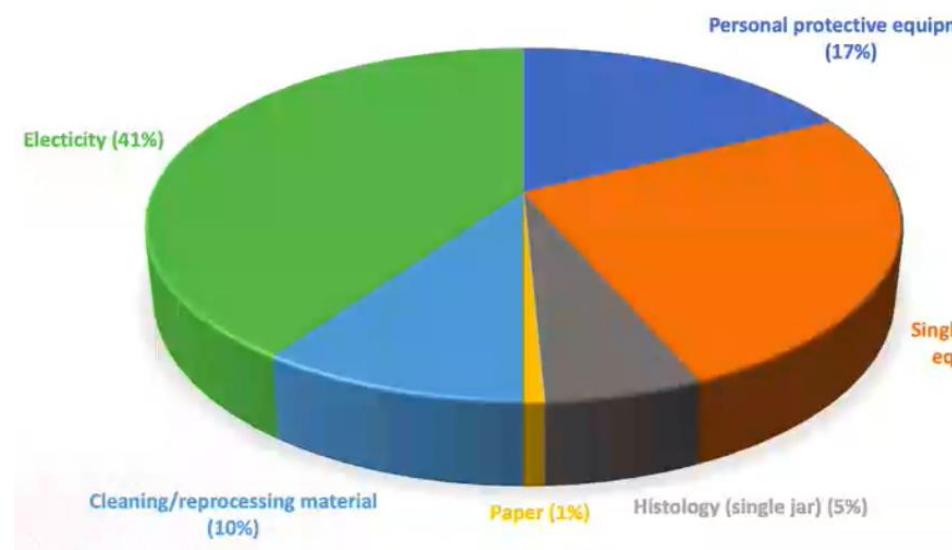

Ergebnisse:

- Bei 60 Mio. Einwohnern in Italien 4.133 Tonnen CO₂ pro Jahr
- Bei 450 Mio. EU-Bürgern 30.804 Tonnen CO₂ pro Jahr
 - = Distanz von 10.760.446 km mit benzinbetriebenen Familienauto
 - = CO₂ Resorption von 70.000 Baumsetzlingen mit 10 Jahre Wachstum

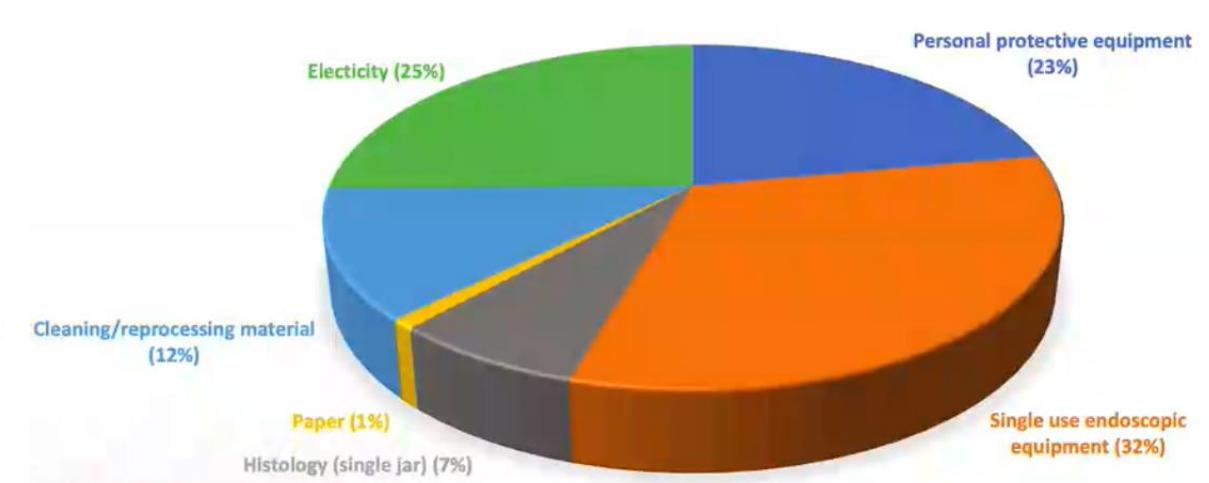

The carbon cost of inappropriate endoscopy

Ergebnisse:

COLONOSCOPY CARBON FOOTPRINT = 6.71 KG OF CO₂

ESOPHAGOGASTRODUODENOSCOPY CARBON FOOTPRINT = 5.43 KG OF CO₂

Clinical & endoscopic management

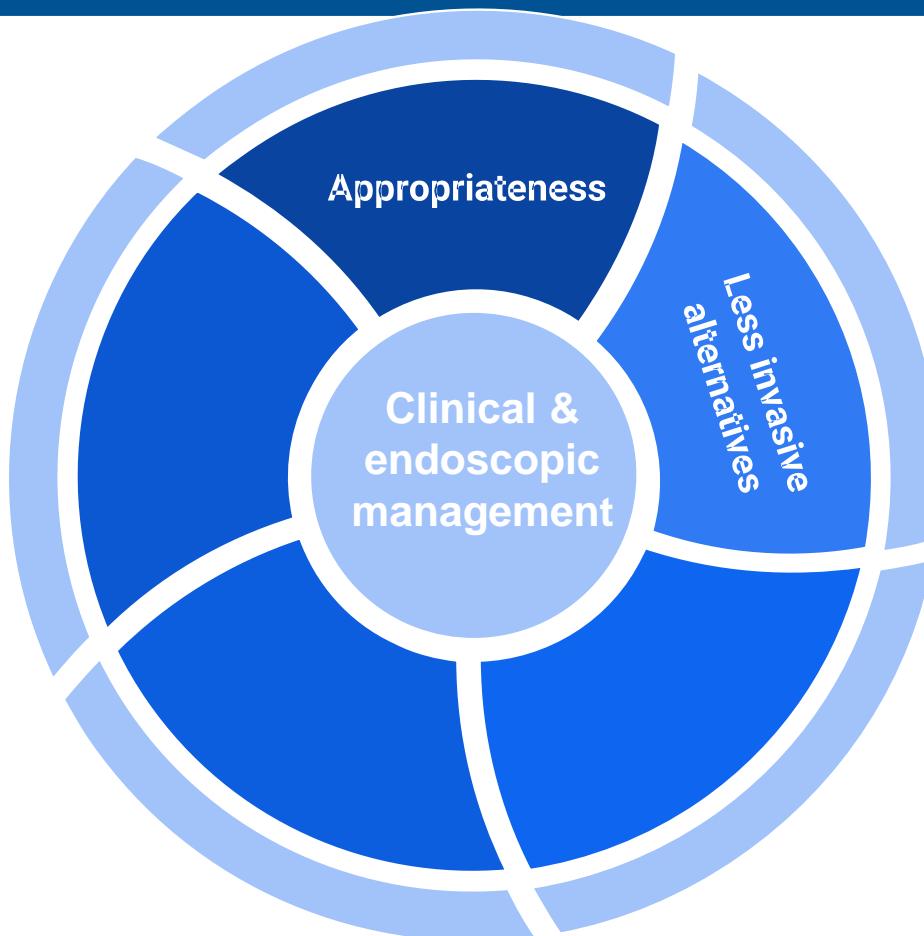

Digestive findings that do not require surveillance

► **Table 1** Prevalent digestive findings that might not require endoscopic surveillance.

	Finding or condition	Prevalence	Malignancy risk
Esophagus	Inlet patch	0.1%–12%	0–1.6% risk of dysplasia
	Erosive esophagitis	11%	0–9% risk of Barrett's esophagus for LA grade A or B erosive esophagitis
	<1 cm columnar-lined esophagus	10%	No increased risk of esophageal cancer
Stomach	Intestinal metaplasia or atrophy limited to one location (i.e., antrum or corpus only)	Up to 25%	0.55% risk of progression to gastric cancer
	Fundic gland polyps	13%–77%	No documented risk of gastric cancer if <1 cm and no suspicious features
Subepithelial lesions	Leiomyoma	0.08%–0.43 %	Benign lesion
	Lipoma	0.2%	Benign lesion
	Pancreatic rest	0.6%–13.7%	Anecdotal malignant transformation
Duodenum	Duodenal peptic ulcer	2%–13%	No cancer risk
Pancreas	Serous cystic neoplasm	Up to 16% of pancreatic cystic neoplasms	Benign lesion
Colon	Low-risk adenomas	~15%–30%	No increased risk versus general population

Clinical & endoscopic management

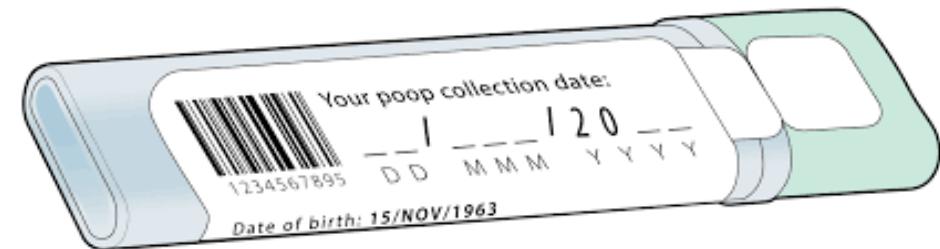

Adequate GI endoscopy indication

Clinical & endoscopic management

Use low waste, less invasive alternatives to endoscopy

- CRC screening: FIT, DNA stool test
- *H. pylori*: Urea breath test
- Chronic diarrhea: Fecal calprotectin
- Esophageal varices: elastography + platelet count

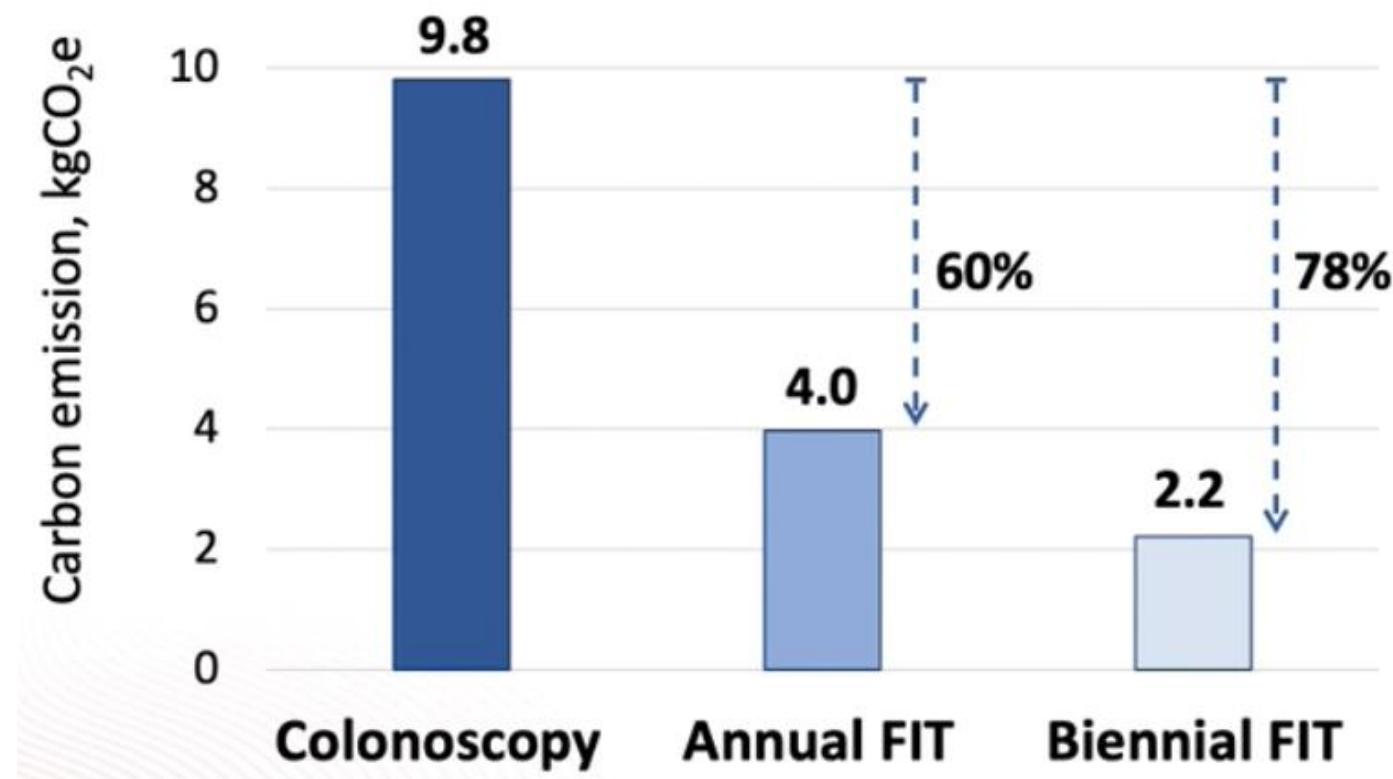

Carbon emissions from a FIT versus a colonoscopy screening program

Ergebnisse: 1. Anzahl der notwendigen Koloskopien

Year	Colonoscopy (n=1000)	Annual FIT (n=1000)	Biennial FIT (n=1000)
0	Colo	FIT	FIT
1		FIT	
2		FIT	FIT
3	Colo	FIT	
4		FIT	FIT
5	Colo	FIT	
6		FIT	FIT
7	Colo	FIT	
8		FIT	FIT
9		FIT	
Total n of colonoscopies		1412	468
			260

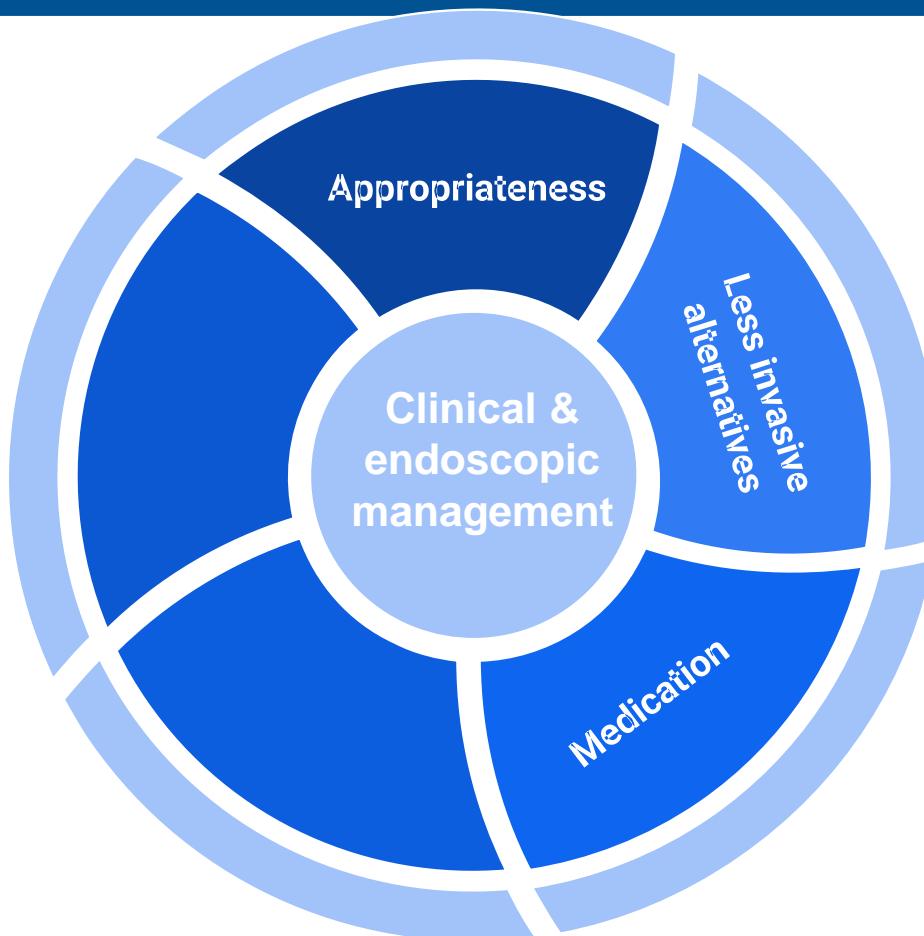

Carbon emissions from a FIT versus a colonoscopy screening program

Ergebnisse: 3. CO₂ Fußabdruck (Reise und Müll) je gescreenter Person

Clinical & endoscopic management

Adequate GI endoscopy indication

Clinical & endoscopic management

Rational use of medication

- Avoid inadequate antibiotic prophylaxis
- Avoid routine saline
- Avoid non-indicated PPI
- Etc.

1 g medication

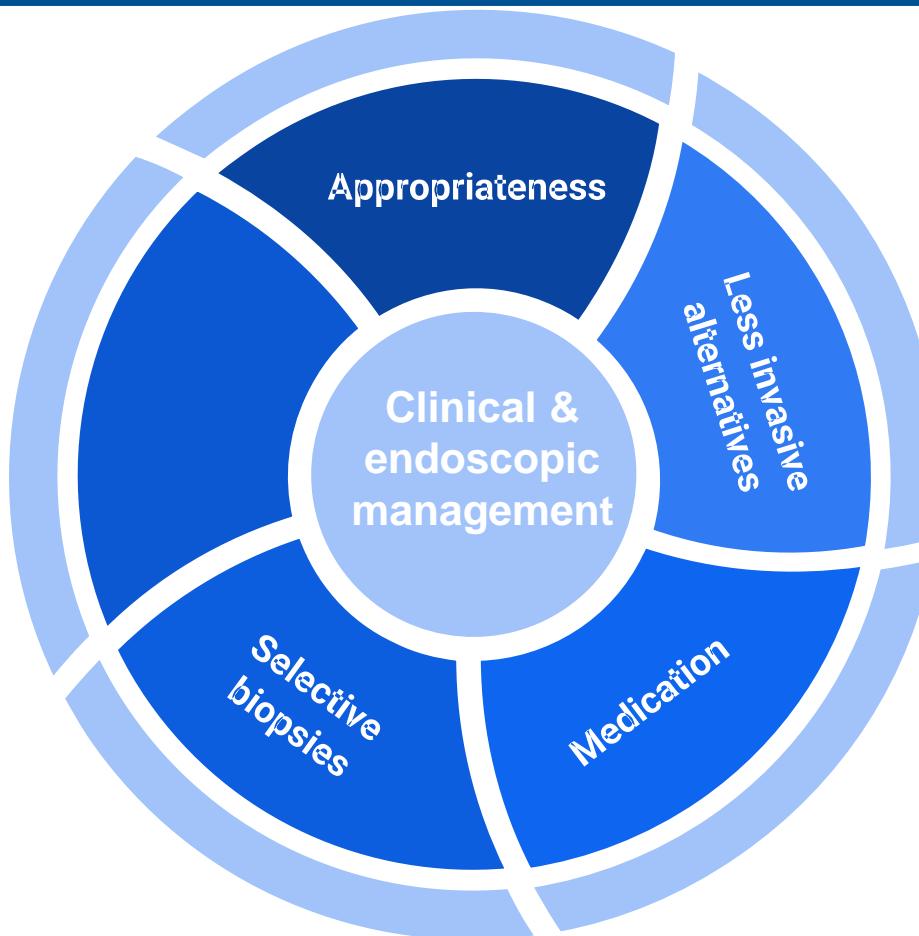

0.1-1 kg CO₂

Clinical & endoscopic management

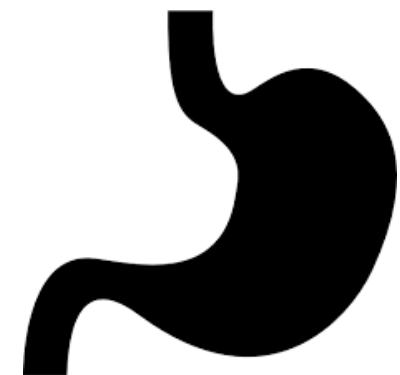

Reduce the number of biopsies

Clinical & endoscopic management

Reduce the number of biopsies

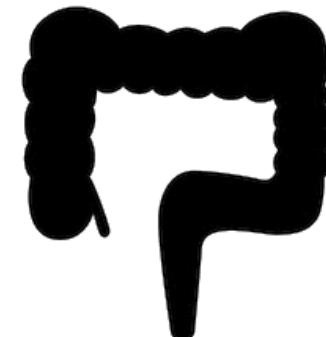

- **Irregular Z line: No biopsy**
- **Candida: Only if therapeutic consequences**
- **Early cancer: Only 1-2 biopsies if resectable**
- **Celiac disease: Same container**

Clinical & endoscopic management

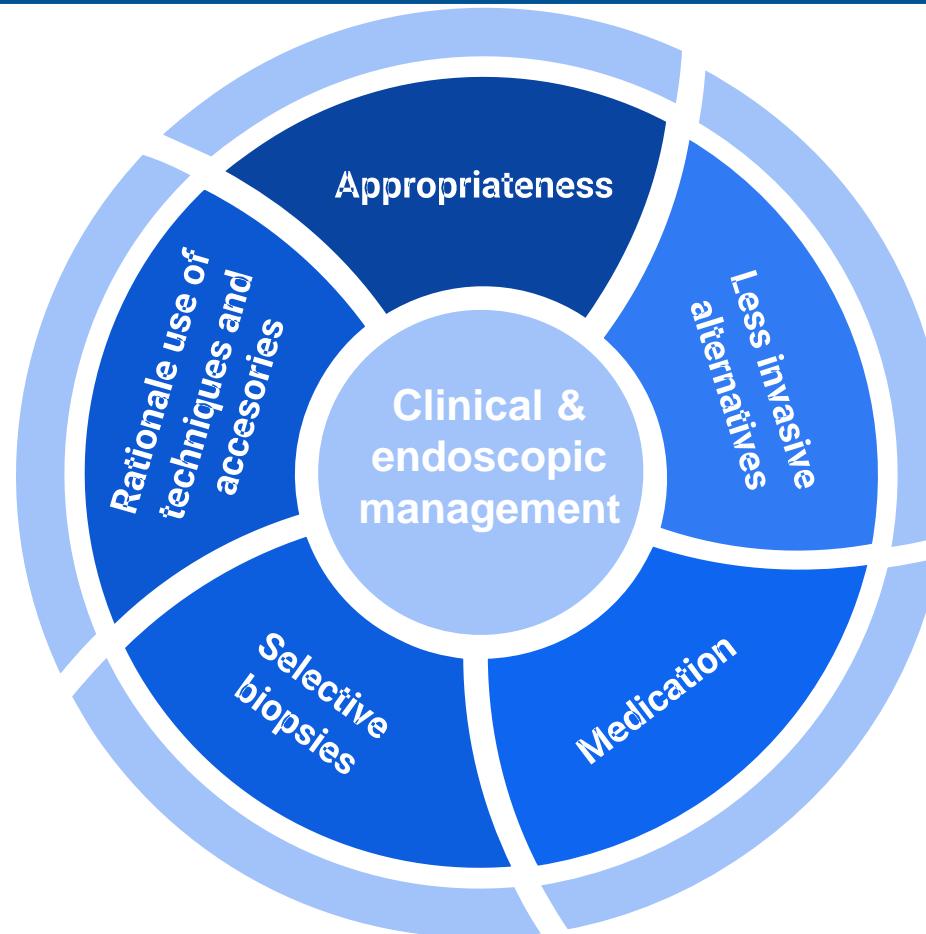

Reduce the number of biopsies

- IBD: Chromoendoscopy
- Resectable lesion: No biopsies
- Diagnose-and-leave ?
- Resect and discard ?

Clinical & endoscopic management

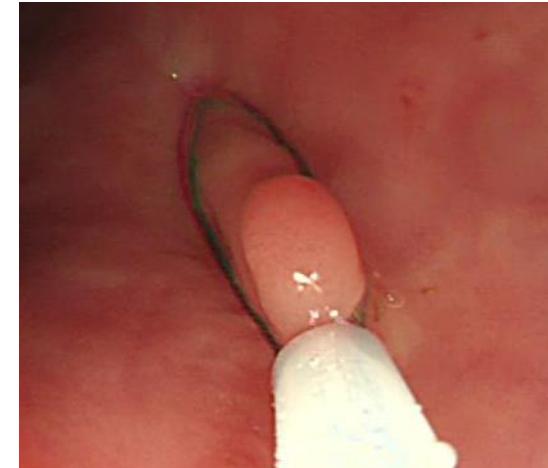

Reduce the number of biopsies

Clinical & endoscopic management

Rational use of techniques and accessories

- **Use the less resource-intensive technique.**
- **Re-use accessories within the same procedure**

Clinical & endoscopic management

Rational use of techniques and accessories

- Use the less resource-intensive technique.
- Re-use accessories within the same procedure
- Do not clip all polyp defects!

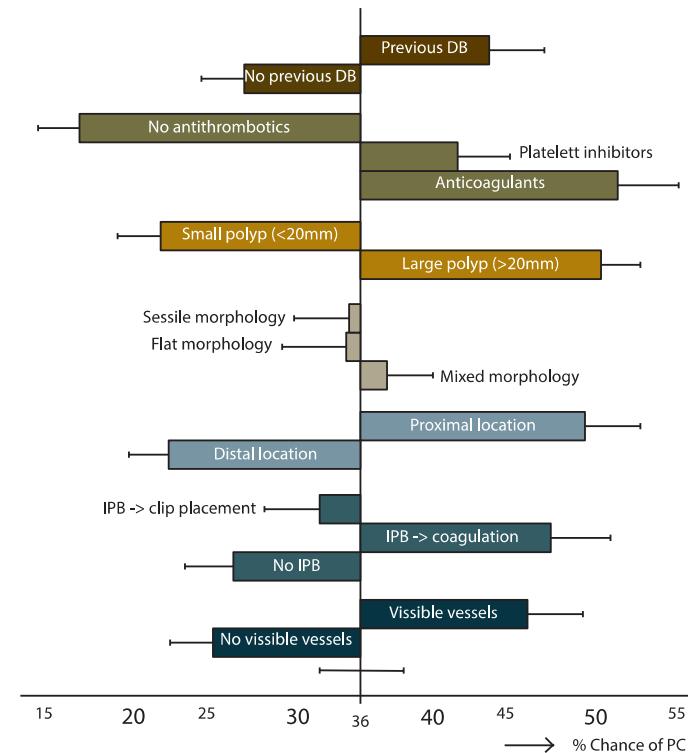

Figure 3. Predictive model for PC. This graph shows the likelihood that an endoscopist would use PC per variable. The chance that an endoscopist would use PC on a random patient with a flat or sessile polyp (reference case) is 36.2%.

Time to act!

The 5 R's of greener endoscopy

Reduce Overall waste production and misclassification

Reuse Reduction up to 40% of kgCO₂e per endoscopic procedure

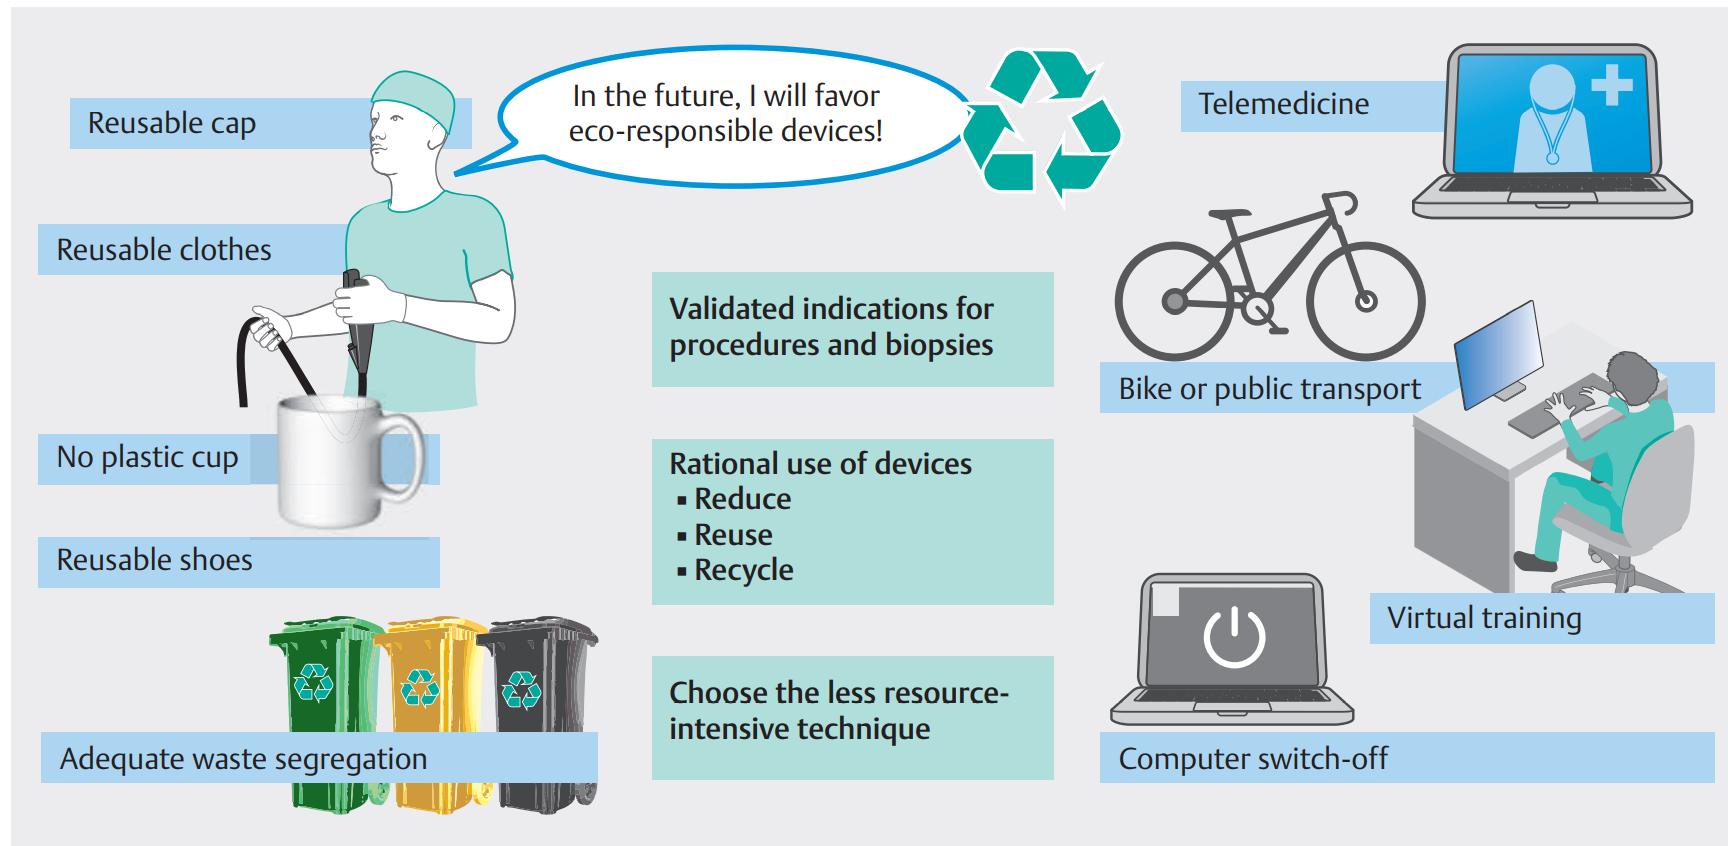

Recycle Overuse of unnecessary materials

Research Unnecessary biopsies - only when indicated

Rethink 1 biopsy jar with 1 specimen = 0.29 kgCO₂e

Take home – ECO Endoscopist
